U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04)

Detailed Action

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2 drawn to 'a capping product', classified in class 252, subclass 88.1.
- II. Claims 3-4, drawn to 'a capping product combined with contaminated sediment', classified in class 405, subclass 129.25.
- III. Claims 5-17, drawn to 'a process for treating metal contaminated sediment', classified in class 405, subclass 129.25.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the claimed product can be used to clean spills; furthermore, the process does not require the manufactured composite article.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require the manufactured composite particle. The subcombination has separate utility such as to clean up spills.

Art Unit: 1751

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Gary Sutter on 03/09/2005 a provisional election was made with traverse to prosecute the invention of Group-I, claims 1-2. Affirmation of this election must be made by applicant in replying to this Office action. Claims 3-17 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Nachtman et al (US 5,897,946).

The use of phrase "for capping and treating metal-contaminated sediment" in the claim-1 has not been treated with patentability. A recitation of the intended use of the claimed invention must

Art Unit: 1751

result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963).

The examiner construes this language as "Intended Use" and not treated with merits for patentability.

The prior art teaches a composite particle comprising a core of gravel encapsulated with a sealant layer containing gypsum and bentonite (Abstract, Col-3, Ln 35-36, Col-4, Ln 1-2, 12-13, 36, 42). The gypsum meets the limitation of sulfur, because the applicants define the sulfur to be elemental, derivative such as sulfide or a sulfur-containing compound (Specification, Page-3, Ln 25-28). All the limitations of the instant claims are met.

The reference is anticipatory.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kallambella Vijayakumar whose telephone number is 571-272-1324. The examiner can normally be reached on M-Th, 07.00 - 16.30 hrs, Alt. Fri: 07.00-15.30 hrs.

Application/Control Number: 10/808,095

Art Unit: 1751

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Yogendra Gupta can be reached on 571-272-1316. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
